

# TECHNICAL DATA SHEET

## **D-C.I.P ACID**

### **ACID DESCALER**

D-C.I.P ACID is a liquid non foaming descaler containing a blend of acids which effectively remove scale, milk and beer stone. D-C.I.P ACID is effective in both hot and cold water. D-C.I.P ACID is recommended for use in C.I.P systems and for soaking equipment in Dairies, Breweries, Wineries, Meat Processing Plants, Bakeries and other food and beverage industries. D-C.I.P. ACID holds the SABS 1828 mark, and is safe for use on food contact surfaces.

#### **Recommendations for use**

Use a 0,5 - 2,0% solution of D-C.I.P ACID depending on the level of scale build up to be removed. The temperature should not exceed 60°C. The recommended contact time varies between 5 - 30 minutes, again depending on the level of scale build up.

#### **Safety Precautions**

D-C.I.P ACID is highly acidic.  
Do not mix with alkalis or chlorine.  
Avoid contact with skin, eyes and clothing.  
For accidental eye contact, flush eyes copiously with water. Seek medical attention.  
For skin splashes, flush with water and remove contaminated clothing. Seek medical attention.
